## **Elgar ReFlex Power™ Series**

# Modular AC/DC/Loads

### **Modular Programmable AC/DC/Loads Power System**

- Truly Modular Design
- 100% Digital System
- Control up to 95 assets across 8 mainframes
- Control multiple AC and DC power supplies and loads in one or more mainframes
- Create "virtual assets"
- Highest Power Density
- World-wide AC or DC input

ReFlex Power™ is a high density, modular programmable power system providing DC, AC and electronic load assets all under control of a single controller. It provides a reconfigurable, flexible platform ideal for ATE and production test environments where RFP™ can provide programmable stimulus and bias power as well as programmable loads for the device(s) under test.

The EIA 4U high RFPTM Mainframe can hold up to 12 single-slot modules or combinations of single, dual and triple slot wide modules to configure (or reconfigure) the system for the particular requirements at hand. The mainframe can support up to 6 kW of output power.

Up to 8 mainframes, potentially up to 95 modules, can be controlled via a single controller. The controller communicates to the individual modules via a high speed proprietary bus protocol. The RFP<sup>TM</sup> controller communicates to the host controller via an Ethernet LAN connection designed in compliance with the LAN Extension for Instrumentation (()) standard, assuring interoperability and ease of integration.

### **Virtual Output Channels**

By using the powerful ReFlex Power software, the modules can be combined via the controller in series or parallel groups, or series / parallel arrays to form new assets, or "virtual outputs." This can be accomplished "on the fly" within a test program, with no need to shut down and reconfigure modules.

This unique capability greatly extends the operating range of a ReFlex Power System, and establishes a new power stimulus paradigm. Virtual output channels reduce the overall asset count in any particular system, while increasing the range of voltage and currents available for UUT stimulus.

Virtual channels can be set up across mainframes, and multiple virtual channels can reside in a single mainframe or system.

By implementing this functionality in test systems or as part of an overall test strategy, users can reduce both up-front capital costs, as well as long term supply chain, logistics and support costs.

### Available power modules include

Single slot, 330 Watt programmable DC supplies

- 16V, 20.6A
- 65V, 5.1A

Dual slot, 1kW programmable DC supplies

- 33V, 30A
- 50V, 20A
- 50V, 25A
- 450V, 2.3A

Triple slot, 875 VA, single phase, programmable AC supply

- Dual range: 280Vrms, 3.5Arms
- Dual Range: 140Vrms, 7Arms

Triple slot, 500V, programmable electronic DC loads

- 15A, 375 Watt
- 30A, 750 Watt

Universal AC/DC

## **ReFlex Power™ Applications**

#### **Rackmount ATE Systems**

High power density, a large number of output channels and 16-bit resolution, all under the control of a single Ethernet controller, greatly simplifies ATE system integration. The wide variety of voltage and current combinations and power density, created by up to 12 separately programmable DC channels in a compact 4U system, makes RFP the most compact ATE power system on the market. Combining this with the RFP AC and load channels in the same chassis and under the same controller, RFP can elegantly satisfy your most demanding ATE system power stimulus requirements.

### **Product Development**

Testing and burn-in of aircraft flight hardware, DC-DC converters, automotive electronics and semiconductor components are just a few applications currently being tested with RFP. From simple DC voltage set points and AC sine waves to complex waveforms and triggers, RFP keeps pace with your product development power stimulus challenges.

#### Aerospace Testing

ReFlex Power is ideal for testing all types of flight hardware and aircraft auxiliary systems. AC power modules can be operated in single or three phase mode, and expanded from 875 VA single phase to 2,625VA three phase, or even 5,250 VA. By combining variable frequency AC power signals from 45 to 5,000Hz with DC assets in a single 4U mainframe, most modern avionics power stimulus can be delivered.

### **Process Control**

Whether you are driving magnets for controlling ion beams for the manufacture of semiconductors or driving a current through electrolyte for precise control of a plating process, RFP is your ideal process control choice. RFP's small footprint with flexible configuration of DC, AC and load modules can solve the most complex process control challenges.

#### Research

A research environment presents some of the most demanding requirements on your test instrumentation. RFP's flexible sequencing and triggering supports your research needs. All too often, equipment that meets the needs of your current project does not meet the needs of your next project. RFP with its modular design protects your capital assets. The RFP architecture allows you to change to different DC voltage and current combinations, add or subtract AC and load modules and parallel and phase-lock modules. This allows RFP to support all your current and future laboratory needs.

### **Key Features**

- Modular
- Control up to 95 assets
- Control multiple AC and DC power supplies and loads in one mainframe
- · Create "virtual assets" on the fly
- Highest Power Density
- Simple integration
- Universal AC/DC input
- Reduced space and supply chain hassles
- Ease of integration
  - ° Trigger bus + DFI (DC)
- GUI (AC/DC)
  - ° Monitor
  - ° Bench use
  - Troubleshooting

## **Elgar ReFlex Power™ DC Power Modules**

330 W / 1000 W / 1200 W

## **High Density Programmable DC Power Modules**

16-450 V

- Near Linear Performance
- Truly Modular
- ≥0.95 PFC
- Digital control loop technology
- High Power Density (3.5 watts/cubic inch)
- "Virtual Assets" by:
   Series operation
   Parallel operation
   Combined operation with loads
- Precision Hardware & Software Triggers
- Simple integration

The DC power supplies of the ReFlex Power<sup>TM</sup> (RFP<sup>TM</sup>) system include models rated at 330W, 1kW and 1.2kW. They are part of a modular family of power assets that integrate into the RFP<sup>TM</sup> Mainframe to provide a wide range of features, functionality, and extensive configurability and adaptability. The modules can be programmed to operate as standalone assets, or in combinations of parallel, series, and series/parallel groups to extend their voltage, current, and power ratings.

Safety, ease of integration and functionality are significantly enhanced by a variety of hardware interface lines. Available at the front panel of each module via a DB-9 connector, these include Direct Fault Interrupt (DFI), Remote Inhibit (RI) and Trigger IN / Trigger OUT signals.

Used together or individually, these signals can be utilized to improve system performance, increase test through-put, reduce system idle time and assure the highest level of safety for the Device Under Test.

The RFP™ system of DC power supplies brings true modularity to DC power assets, and makes possible a high degree of reconfigurability and adaptability through a mainframe-based architecture. The mechanical design is ruggedized for harsh environments, including mobile applications, as well as general-purpose industrial and laboratory rack-mount ATE.

The thermal design features integral, variable speed fans so the cooling performance scales with the complement of modules in the Mainframe and their output loading. This feature minimizes audible noise.

2.3-30 A

<sup>\* 1250</sup> Watt module must have an AC Input voltage above 188 Vac or DC input above 210vDC. The Module will not operate below the required input line volage.

## **Elgar ReFlex Power™ AC Power Modules**

875 VA

### **High Density Programmable AC Power Modules**

## 140-280 VAC

3.5-7 Arms

Universal

AC/DC

LX/ ETHERNET

- Single or multi-phase output
- Parallel operation up to 5250 VA, 3 phase
- 4.8 Crest factor
- Digital control loop technology
- Brown out protection to 65% of nominal input line
- Up to 875 VA
- 45 to 1200 Hz or 5000 Hz
- Universal AC/DC input via mainframe

Two frequency options are available to satisfy most avionics, commercial and industrial test requirements; 45Hz to 1200Hz or 45 to 5000Hz.

The module utilizes high-frequency power conversion for high efficiency to maximize power density and realize lightweight and small size. Weighing only 11.4 lb., a three phase 2625 VA power system weighs only 50lbs. and can be expanded to 5250 total VA in only 8U of rack elevation.

The thermal design features integral, variablespeed fans so that the cooling performance scales with the complement of modules in the Mainframe, and their output loading. This feature minimizes audible noise and airflow requirements.

The ReFlex Power<sup>TM</sup> (RFP<sup>TM</sup>) system includes an AC power source rated at 875VA with two output voltage ranges, 0-140VAC and 0-280VAC. This AC source module is part of a modular family of power assets that integrate into the RFP<sup>TM</sup> Mainframe to provide a wide range of features, functionality and extensive configurability and adaptability. The AC module can be set up to operate as a standalone asset, in combinations of parallel or in multi-phase groups to extend their voltage, current, and power rating.

Safety, ease of integration and functionality are significantly enhanced by a variety of hardware interface lines. Available at the front panel of each module via a DB-9 connector, is Remote Inhibit (RI).

The RFP AC Power module provides a very robust output, with surge rating of 140% (7A to 10A) and a crest factor rating of 4.8:1.

| Frequency                     | 45-1200 Hz, up to 5 kHz optional  |
| Crest Factor                  | 4.8 X FS rms current  |
| RMS Regulation                | 100% Resistive Load effect or 10% line change from nominal Voltage Mode 0.1% of FS  |
| Programming Accuracy          | Voltage +/-( 0.1% + .2%/kHz ) of FS from 0.25% to 102% of range<br>Current +/-(0.5% + 0.75%/kHz) of FS from 2% to 102% of range<br>Frequency (0.01% + 0.01%/kHz) of setpoint  |
| Programming Resolution        | Voltage 0-140VAC 20mV, 0-280 40mV<br>Current 5mA<br>Frequency 0.1Hz thru 1kHz; 0.5Hz thru 5KHz  |
| Temperature drift             | Voltage .05% of FS per °C<br>Current .05% of FS per °C  |
| Distortion (Resistive Load)   | <1% to 500Hz<br><2% to 2KHz<br><5% to 5KHz  |
| Output DC Offset              | 0.1Vdc maximum  |
| Efficiency                    | (72% - 1.4%/kHz) at full output power and 115VAC input, and no load on auxiliary output, typical  |
| Noise                         | 55dB below full scale, typical; RMS value measured with output at 50Hz and with a bandwidth from 10kHz to 20MHz   |
| Power Factor                  | 0.95 typical  |
| Hold-up time                  | Dropout of AC input to zero for 10ms at full output power   |
| Remote Sense                  | 0.75Vrms per line Input   |
| Overvoltage Protection        | Range: 1.4% to 110% Accuracy: 2% of setpoint  |
| Overcurrent Protection        | Range: 0.4% to 106% Accuracy: 3% of setpoint  |
| Auxiliary AC Output           | Isolated, 0Vac to 31.6Vac, 2A max, tracks main output (140 Vac range) at 22.6% of output  |
| Cooling                       | Forced air convection, req. 40CFM airflow at altitude and ambient temperature   |
| Parallel                      | Up to 6. Must be adjacent.  |
| Multi phase                   | Up to 6 Delta and wye loads are supported. Modules must be configured as wye sources (neutrals connected).  |
| Phase Programming Range       | 0-360 degree; B-phase and C-phase with respect to A-phase; any module could be an A-Phase (the master); adjacent modules to the right of A-Phase would be B-Phase and C-Phase; counterclockwise phasor rotation is assumed, therefore the phase angle offset is lagging the master reference. |
| Phase Programming Accuracy    | 1 degree plus 1°/kHz for balanced resistive load measured with respect to A-phase, at 25 degree C, +/- 5 degree.  |
| Remote programming connector  | 9-pin D-sub   |
| Output connector              | Combination signal/power contact subminiature D (Out cables and mating connector kits available)  |
|                               |   |

## **Elgar ReFlex Power™ Load Modules**

375-750 W

### **High Density Programmable Load Modules**

500 V

• High Voltage (500V) Input

• Digital control loop technology

• Two models: 375 W & 750 W

- Up to 15 A or 30 A
- Parallel up to 8 automatically
- Modular
- High Power Density
- Simple integration

The modules utilize FET active current sinks in modular form to get the flexibility of the two power ranges. The 375 W module is housed in a triple-width enclosure, and weighs 8.2 lb. The 750 W module is also triple-width, and weighs 12.9 lb.

Two modes of operation are available. Current mode up to 30A and resistive mode, programmable 0 to 5000 ohms in three ranges. In addition, each Active Load can be controlled independently with an analog signal to control or nodulate the output with an external signal.

The thermal design features integral, variablespeed fans so that the cooling performance scales with the complement of modules in the Mainframe, and their output loading, minimizing the audible noise and the airflow requirements.

The High Power Active Load (HPAL) and the Low Power Active Load (LPAL) of the ReFlex Power<sup>TM</sup> (RFP<sup>TM</sup>) system include models rated at 375 W and 750 W. They are part of a modular family of power assets that integrate into the RFP<sup>TM</sup> Mainframe to provide a wide range of features, functionality, and extensive configurability and adaptability. The modules could be set up to

functionality, and extensive configurability and adaptability. The modules could be set up to operate as standalone assets, or in combinations of parallel groups to extend their current, and power ratings.

Safety, ease of integration and functionality are

Safety, ease of integration and functionality are significantly enhanced by a variety of hardware interface lines. Available at the front panel of each module via a DB-9 connector, is Remote Inhibit (RI).

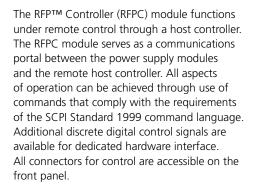

## **ReFlex Power™ Load Modules : Specifications**

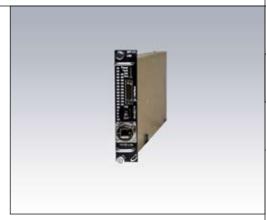

| DC Loads Modules General Specif       | ications   |                                 |  |
|---------------------------------------|--|---------------------------------|--|
| Physical                              | Size: 3 RFP Slots, Weight 7.5 lbs (375W); 10.4 lbs (750W)  |                                 |  |
| Connectors                            | DC Input and Sense: MS3106F-20-24S Remote Programming: 9 pin D-Sub (Output cables and mating connector available)  |                                 |  |
| Stability                             | <0.1% of FS after 8 hrs  |                                 |  |
| Temperature Drift                     | <0.05% of FS/°C  |                                 |  |
| Protection                            | Overvoltage: 525V ± 3%, Overcurrent: 20A ± 3% (375W), 40A ± 3% (750W)<br>Overpower: 19-394W ± 5% (375W), 38 – 788W ± 5% (750W), Reverse Voltage: -15V ± 1V |                                 |  |
| Parallel Operation                    | Up to 8 modules.   |                                 |  |
| Noise                                 | 30mA (pk-pk), 20 Hz to 20 MHz bandwidth  |                                 |  |
| Programming Response Time             | 55ms   |                                 |  |
| Dynamic Response (10 - 90%/90 to 10%) | 50μs   |                                 |  |
| Remote Sense                          | 0.75V per source line  |                                 |  |
| Max Float Voltage                     | 500Vdc any input terminal to chassis   |                                 |  |
| Cooling                               | Internal fans, require 110 CFM minimum airflow at altitude and an  | nbient temperature              |  |
| All specifications                    | 25°±5°C.   |                                 |  |
| Digital Volt Meter                    |  |                                 |  |

| Min Voltage, Full Load                | 3V   | 3V                              |  |

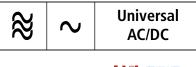

## **Elgar ReFlex Power™ System Controller**

### **Programmable System Controller**

The ReFlex Power™ (RFP™) System Controller (RFPC) provides a single command and status communication port for all power assets (power supplies and loads) within the RFP™ system. The RFP™ architecture is essentially a distributed processor system, and the role of the RFPC is command interpreter and redirector, plus manager of module status messages. The unique features of the RFP™ system of reconfigurablity and extensibility are made possible through the use of the latest in controls technology. An FPGAbased implementation uses VHDL, embedded processor cores for firmware based systems control, ARCnet™ inter-module communication and LAN system communications. The LAN network interface conforms to IEEE 802.3 standard, and is certified LXI class C compliant. Network transmission rates up to 100 Mbps conforming to 10 BASE-T and 100 BASE-TX specifications are supported.

| Ethernet Controller General Specifications |   |  |  |
|--|---|--|--|
| Modules Controlled                         | Modules in RFP Mainframe(s)   |  |  |
| Command Language                           | SCPI Standard 1997 command language via downloadable IVI Drivers                                |  |  |
| Control Interface                          | To host: LXI class C Ethernet To Module: Proprietary high speed bus protocol                    |  |  |
| Front Panel Switch                         | Standby switch, Disables output but does not disconnect the input power                         |  |  |

The ReFlex Power System Mainframe consists of 12 fixed pitch "slots" for insertion of AC, DC or Active load modules and the Controller which are one, two, or three "slots" wide. Very compact in size, 4RU by 17.00" deep, the mechanical design is ruggedized for harsh environments including mobile applications as well as general-purpose industrial and laboratory rack-mount ATE.

The Mainframe connectors on the rear panel facilitate the connection to the AC mains and provide for extending the system to multiple frames, (up to eight). There are no active components in the mainframe, therefore, once installed, would not have to be uninstalled under normal circumstances. It also accommodates the easy populating of the user system with the various power assets. The mainframe also contains the proprietary RFP backplane.

Any RFP module can be installed in any slot(s) in the mainframe. In addition, there is no Slot 0 designated in the power system for the controller. It can be installed in any location depending on the users desired configuration.

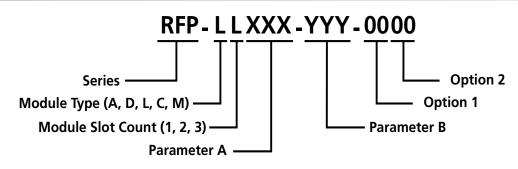

The Mainframe is available in three versions. The basic rack mount version, which installs flush with the front of a cabinet, a version which is set back by 4.0" to allow for cable space at the front of the cabinet, and a version which removes the front panel mounting ears to facilitate installation in portable systems.

The setback version includes an optional removable front dress panel and a cable chase for installation on the bottom of the mainframe.

- Worldwide input voltage capability plus 270 VDC
- System input power connections
- Connectors for system expansion
- No active components
- Power output up to 3600W / 6000W
