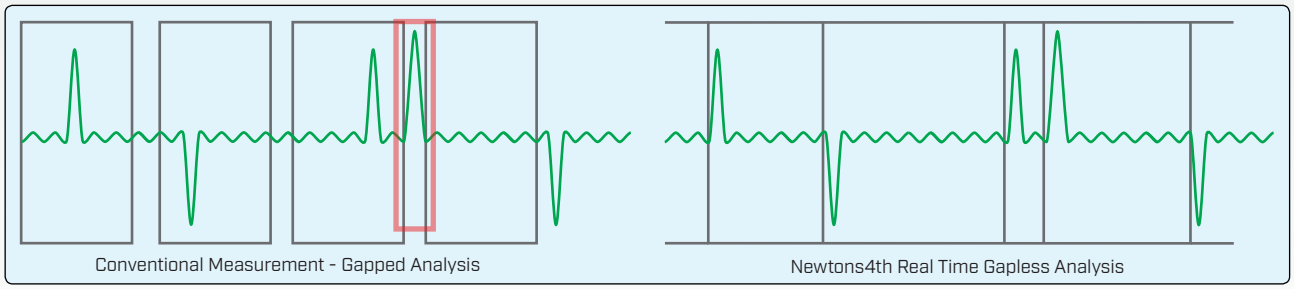
Real Time No Gap Analysis

The PPA5xx/PPA15xx series Power Analyzers use a real time no gap analysis technique unique to Newtons4th that enables real time measurements to be taken with no gap in incoming data from the ADC. This ensures that no events are missed, which is particularly important for the correct measurement of asynchronous waveforms.



Conventional Measurement - Gapped Analysis

Newtons4th Real Time Gapless Analysis

Intuitive User Interface Simplifies Setup

The PPA5xx/PPA15xx user interface has been developed with ease of use in mind. A simple button layout eases setup of the instrument allowing the engineer to commence measurements quickly with no fuss.

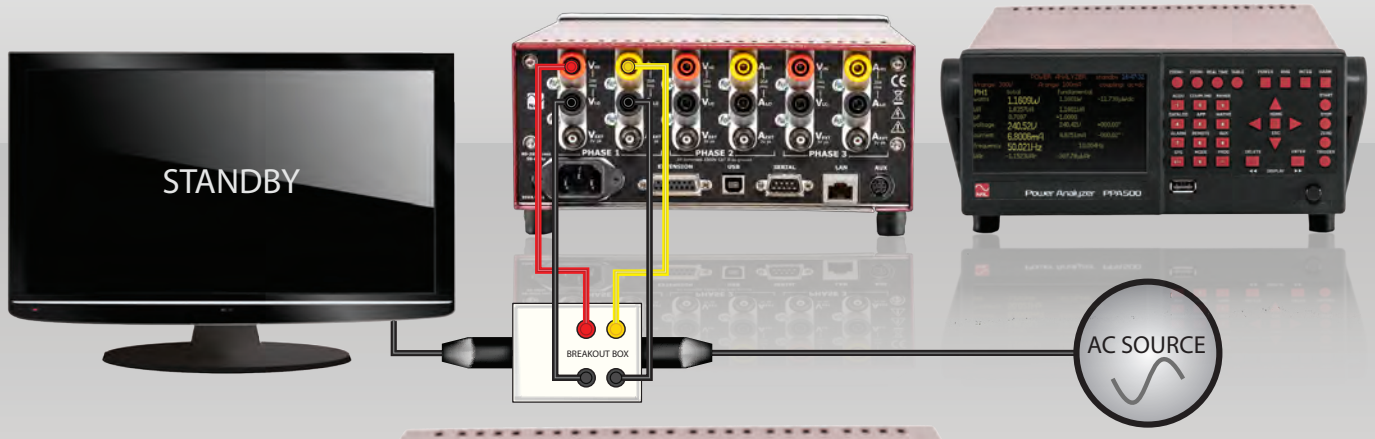
Example Applications

Example Application : Standby Power Measurement IEC62301/EN50564

The PPA5xx and PPA15xx are the perfect instruments for tests such as EN50564 Standby Power Testing. PC software that provides simple testing and reporting for EN50564 is available free of charge from the N4L website.



Clear, Flexible Display

Backlit LED display with zoom functions to customise the parameters displayed

Front USB Port

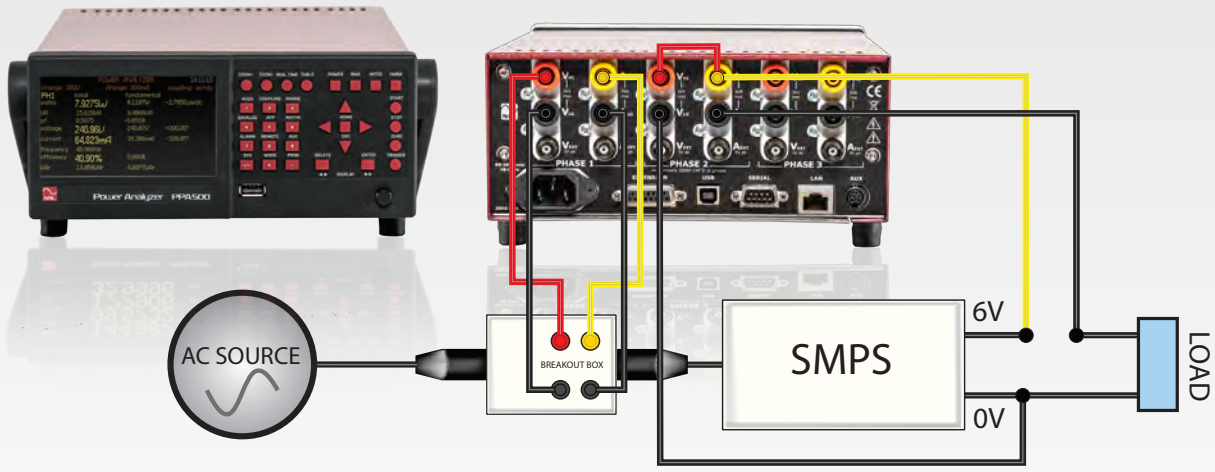
Datalogs, Results and instrument configurations can be saved to internal memory, an external USB device or directly into N4L software.

ENERGY STAR

Meets or exceeds the requirements and methodology of U.S. EPA (Energy Star), U.S.DOE, California Energy Commission (CEC), among others.

Example Application : AC-DC Power Supply Efficiency Testing

The PPA5/1520 or PPA5/1530 can be used in 2 Phase 2 Wattmeter configuration for efficiency testing of power supplies, ballasts and many other devices.



On-screen efficiency readings

The PPA5/1500 instruments can be configured to display the real time efficiency of a system.

1,2 or 3 Phase measurements

The PPA5/1510 (1 Phase), PPA5/1520 (2 Phase) and PPA5/1530 (3 Phase) use fully isolated and independent measurement channels.

PPA1500 Vector Display / Accessories

PPA1500 Vector Display

The PPA15xx features a vector display offering an excellent insight into the relationship between voltage and current as well as each individual phase of a multi phase system. An intuitive user interface provides the user with an immediate picture of system balance as well as the lead/lag relationship between voltage and current.

Due to the specialist nature of Power Measurement Instrumentation Calibration, N4L utilise both commercially available calibration equipment (such as the Fluke 6105A for UKAS Certification) along with N4L bespoke designed signal generation equipment in order to calibrate our instruments over the full frequency range (up to 2MHz). Calibration over the full frequency range is uncommon given that such signal generation equipment is not commercially available. When supplied with an N4L analyzer, all customers will receive a calibration certificate covering the complete frequency range.

*UKAS Calibration is available from N4L UK HQ only, details of calibration performed at other locations is subject to local accreditation, please contact your local office for more details.
