Electrolytic Cells Electrode

COMPANY

Company Profile Gaoss Union was established in 2008 in East Lake High-Tech Development Zone of Wuhan, known as "Optics Valley of China".

Ever since its establishment, Gaoss Union has devoted to research, development, production, sales and service of electrochemical products. It is a scientific and technological company with research of electrochemical reactions as well as design and manufacture of electrochemical devices as its major businesses.

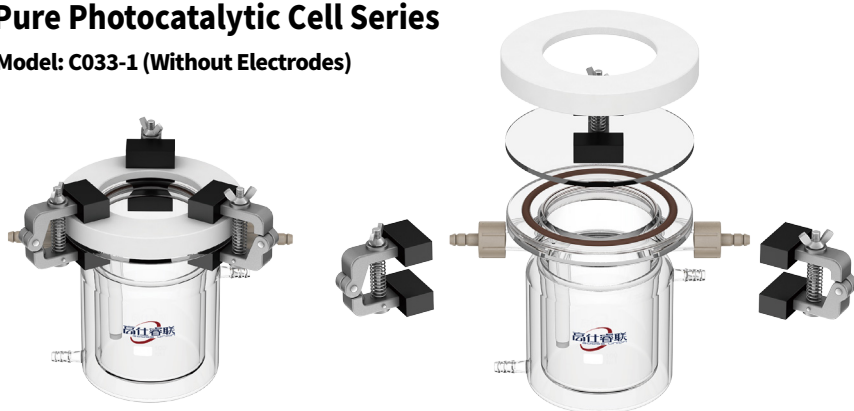

Gaoss Union manufacture and sell three-electrode, electrolytic cells, flow cells, characterization cells, electrochemical materials, etc. required for electrochemical experiments, as well as provide customized electrode and electrochemical device services.

Welcome to inquire.

Pure Photocatalytic Cell Series

Model: C033-1 (Without Electrodes)

- Top-illuminated pure photocatalytic reaction chamber.
- Imported quartz light window with a light transmittance of 95% or above.
- The chamber is equipped with a gas inlet tube to disperse incoming gas, enhancing aeration efficiency.
- The jacketed layer incorporating a constant temperature water bath function. The constant temperature is achieved by continuously circulating temperature-controlled water in the jacket layer of the photocatalytic cell.
- Simple structure for easy operation with clamps.

Model: C033-2 (Without Electrodes)

Model	Specifications
C033-1	50mL/100mL
C033-2	50mL/100mL
