Your Power Testing Solution

IT7800

high power programmable AC power supply

High Voltage Series

Voltage up to 700VL-N, even reach 1050VL-N

The IT7800 series is a new generation of high power programmable AC power supply featuring user-friendly programming options, a novel touch interface, and rich waveform analysis capabilities. The high-voltage series is available at voltages as high as 700 VL-N and even fulfills 1050 VL-N test standards. By paralleling them, the high voltage series may be easily enlarged to 900 kVA.

The IT7800 series is equipped with an LCD touch screen design with an intuitive and easy-to-use UI interface allowing users to quickly and smoothly use the operation. Built-in all-round power meter and arbitrary waveform generator, which can simulate harmonics and various arbitrary waveform outputs; programmable output impedance and a full range of measurement functions make the IT7800 series widely used in new energy, power electronics, scientific research institutions and other fields of research and development, production, quality control and other stages.

FEATURE

- Voltages up to 700 VL-N, even 1050 VL-N
- Harmonic simulation and analysis functions up to 50th *1
- Output frequency: 16-2400 Hz, voltage and frequency output variation rate adjustable
- Built-in AC power meter
- AC/AC+DC output mode possible
- Three-phase output
- Harmonic and interharmonic waveform synthesis *2
- Programmable output impedance
- Touch screen design, simple UI interface
- Arbitrary waveform output can be simulated, and CSV file import waveform is supported.
- Built-in rich waveform database
- List mode analog utility reproduction function, realizing the instantaneous power interruption simulation function
- Output start/stop phase angle can be set from 0 to 360°.
- Surge & Sag function*2
- Relay Ctrl relay control output function for electrical isolation between the object to be measured and the source.
- Built-in USB/CAN/LAN/digital IO interface, optional GPIB/RS232 interface.
- Built-in IEC61000-4-11/4-13/4-14/4-28 test waveforms*2

*1 Voltage/current harmonic analysis, voltage harmonic simulation

*2 Coming soon

01 IT7800 High Power Programmable AC Power Supply (HV)

Your Power Testing Solution

IT7800 High Power Programmable AC Power Supply (HV)

Applications

New Energy

OBC, AC/DC charging pile

Power electronics

frequency converter, UPS, AC motor

Appliance

air conditioner, microwave oven, refrigerator, washing machine

Civil aviation

airborne equipment, airport ground facilities

Research institute, lab, testing organizations

AC-DC power adapter, EMC test

Medical equipments

CT, MRI, life detector etc

Civil aviation

New energy

Home appliances

Research institutes

Your Power Testing Solution

IT7800 High Power Programmable AC Power Supply (HV)

Easy-to-operate touch design

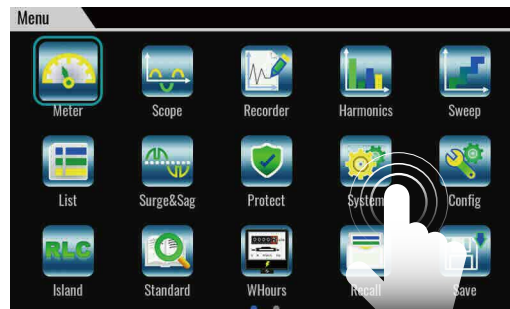

The IT7800 series is equipped with a new touch screen design with a simple and intuitive UI interface.

Combined with the keyboard knob design allows users to make direct and quick selections.

Users can choose different interface display styles, customize the type of parameters and display position of the page.

The user can choose different interface display styles, customize the type of parameters and display position of the page, and humanized settings can meet a variety of measurement needs in the test.

The screen can display real-time voltage and current curves, up to 6 oscilloscope data lines, users can instantly analyze without an oscilloscope and save in time.

Output frequency up to 2.4kHz, voltage or frequency output rate of change adjustable

The IT7800 series output frequency is adjustable from 16-2400Hz, which allows the user to set the rate of change of voltage or frequency output, so that the voltage or frequency can reach the set value in a regular and gradual manner, which can be used to verify the operating range of the product more accurately, and also reduce the inrush current when the object to be tested is switched on.

voltage adjustable

frequency adjustable

List Mode

The IT7800 series provides users with a simple and easy way to realize gradual or continuous changes in output parameters through the LIST/SWEEP/SURGE&SAG modes. The amplitude, frequency, phase, waveform and other parameters of the output voltage can also be output through the control of internal triggers or external triggers within the instrument, so that it can simulate the characteristics of various kinds of power supply with instantaneous power outage, sudden wave, and slow rise.

No	ACrms V	Freq Hz	Time S	More
1	50.500 / 55.000 / 65.000	50.000	0.2
2	60.000 / 80.000 / 85.000	60.000	1
3	60.000 / 80.000 / 85.000	100.00	0.5
4	60.000 / 80.000 / 85.000	50.00	0.1

Your Power Testing Solution

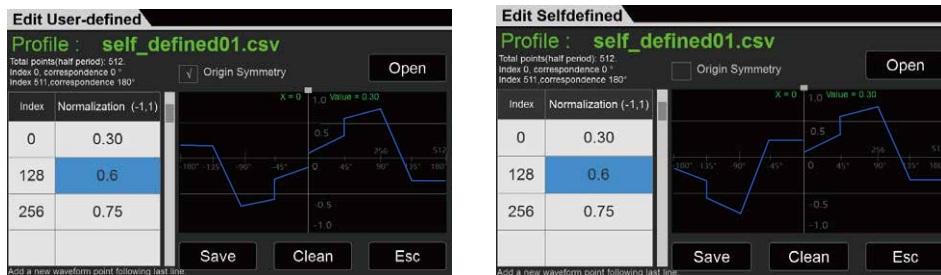

IT7800 High Power Programmable AC Power Supply (HV)

Built-in Waveform Database

The IT7800 series has built-in many different types of waveforms, such as triangle, sine, square, and sawtooth waveforms, which can be recalled through the menu and displayed on the LCD screen.

Users can also edit waveforms through the interface's customization mode to mimic and reproduce the real power waveforms at the scene of the problem.

The IT7800 series has 30 built-in harmonic distortion waveforms.
